

Pedro Beber de Queiroz Vidal

Campinas, SP, Brazil / p300865@dac.unicamp.br / github.com/pedrobeber / [Google Scholar](https://scholar.google.com/citations?user=...)

LLM agents and computer vision researcher, designing multi-agent architectures at Unicamp's HIAAC with a PROEX/Unicamp graduate scholarship. Papers at SIBGRAPI, WACV, CVPR, FG and IJCB, three as first author, and podium finishes in four international challenges, including **1st place** in a sub-task of the FRCSyn Challenge at WACV 2024.

EDUCATION

University of Campinas (Unicamp)

MSc in Computer Science — PROEX/Unicamp scholarship holder

Thesis: architectures for LLM multi-agent systems, integrating dynamic memory retrieval and inter-agent communication.

Campinas, SP, Brazil

2026 — Mar 2028 (expected)

Federal University of Paraná (UFPR)

BSc in Computer Science

Thesis on synthetic facial data, extended into a survey submitted to IEEE Access.

Curitiba, PR, Brazil

2020 — Jul 2025

Federal Institute of Paraná (IFPR)

Technical Diploma in Informatics

Irati, PR, Brazil

2016 — 2019

RESEARCH EXPERIENCE

HIAAC, University of Campinas (Unicamp)

Graduate Researcher

Campinas, SP, Brazil

Aug 2026 — Present

- Design a multi-agent architecture for LLM agents that couples dynamic memory retrieval with an optimized inter-agent communication protocol, evaluated against state-of-the-art agentic benchmarks.
- Benchmark reasoning and orchestration strategies — ReAct, chain-of-thought, in-context learning, task decomposition — to isolate which choices actually move task success under controlled conditions.
- Authored a standalone literature review of LLM multi-agent systems, mapping communication topologies, memory mechanisms, and evaluation practice across the field.

BOVIFOGR, UFPR-UNICO Partnership

Undergraduate Researcher, Computer Vision

Curitiba, PR, Brazil

Oct 2021 — Mar 2025

- Built the submission that took **1st place** in Sub-Task 2.1 of the FRCSyn Challenge at WACV 2024, and the SDFR entries that placed 3rd in both tasks at FG 2024.
- Trained and evaluated face recognition models on synthetic identity datasets of millions of images, adapting InsightFace and running the pipeline end to end from data processing to benchmark reporting.
- Quantified the impact of synthetic training data across eight standard benchmarks, identifying which dataset characteristics predict recognition performance; published at SIBGRAPI 2024 and extended into a survey submitted to IEEE Access.
- Authored the group's masked face recognition benchmark (SIBGRAPI 2022) and represented it at the Occluded Face Recognition competition at IJCB 2022.
- Built reproducible benchmark protocols over standardized datasets to separate genuine model gains from training-data effects, tracking every run in Weights & Biases.
- Collected liveness samples in the field, assisting elderly participants unfamiliar with the technology, and drove adoption of the collection app on social networks.

- Improved occluded face verification by extending Earth Mover's Distance as the matching metric, validating the gain through False Non-Match Rate at fixed False Match Rate; published at SIBGRAPI 2023.
- Selected for a summer school on innovation and startups with international students, followed by an internship at the university's computer science research institute.
- Proposed a financial planning application for university students covering tuition, living costs, and scholarship tracking.

HONORS AND COMPETITIONS

FRCSyn Challenge, 1st Edition, WACV 2024 — **1st place**, Sub-Task 2.1; 3rd, 4th and 4th in Sub-Tasks 1.1, 1.2 and 2.2. 2023

SDFR Competition, FG 2024 — 3rd place in both tasks of Synthetic Data for Face Recognition. 2024 — 2025

FRCSyn Challenge, 2nd Edition, CVPR 2024 — 6th place, Sub-Task 2.1. 2024

PROEX/Unicamp graduate scholarship — graduate research funding. 2026

OBMEP, Brazilian Mathematics Olympiad — Honorable Mention. 2019

PROJECTS

Federated Learning for Privacy-Preserving Facial Recognition — [code](#) 2026 · Unicamp
2D face recognition trained without centralizing biometric data, combining federated clients with synthetic facial data to hold accuracy under non-IID splits, limited client compute, and scarce local data.

Comparative Evaluation of Synthetic Facial Datasets — [thesis](#) 2025 · UFPR
Trained face recognition models on multiple synthetic datasets and scored them across eight benchmarks, isolating the dataset characteristics and quality trade-offs behind stronger and weaker performance.

Training Pipeline for Synthetic-Data Competitions — [code](#) 2024 · UFPR
The pipeline behind the SDFR and FRCSyn submissions: InsightFace adapted for training and evaluation on million-image synthetic identity datasets, with results organized for comparison across datasets, model configurations, and benchmark protocols.

Robotics Team, Irathunder Group 2017 — 2019 · IFPR
Programmed and built LEGO robots for rescue, sumo, and line-following events; competed in two editions of the Brazilian Robotics Olympiad (OBR).

TECHNICAL SKILLS

LLMs, agents	Multi-agent systems, inter-agent communication, dynamic memory retrieval, ReAct, chain-of-thought, in-context learning, task decomposition, agentic benchmarking.
Machine learning	PyTorch, TensorFlow, MXNet, Keras, OpenCV, InsightFace, Flower; generative models, face recognition, liveness detection, knowledge distillation, LoRA and parameter-efficient fine-tuning, Federated Learning.
Data	NumPy, Pandas, Scikit-learn, Matplotlib; dataset validation, data cleaning, exploratory analysis, metric computation, statistical comparison of results.
Engineering	Python (advanced), Git, Linux, shell scripting, Conda, Jupyter, Weights & Biases; reproducible experiment design, distributed training, large-scale dataset processing.
Languages	Portuguese (native), English (fluent).
